Melinka Inspection

On August 8, 2023 Newport Rigging Group performed a visual inspection of the Melinka masts and standing rigging at Safe Harbors Marina in Portsmouth RI. The masts had been on the hard for a year and we inspected, lubricated, dressed, stepped and tuned them. Both Reckmann Furlers were fully dis-assembled and inspected as well. All rod cold heads were found to be satisfactory and both rigs were tuned to their previous settings. The rigs and rigging are capable of offshore sailing. We recommend the rigs and rigging be fully serviced every 4 years.
